A state law requires us to inform you of the benefits and risks of veterinary procedures.

Vaccines are used to protect your pet(s) from life threatening and highly contagious diseases. Although reactions are rare, they do occur. They may include local site pain and swelling, listlessness, anorexia, allergic reactions, a rise in temperature, and rarely, vaccination site tumor in cats.

The benefits of surgery are numerous, including disease prevention and treatment. Risks include hemorrhage, discomfort and pain. This is why we recommend blood screenings and post-operative pain medication.

Anesthetic risks are rare, but may include vomiting, seizures, cardiac and respiratory arrest. These risks are greatly reduced with newer injectable and gas anesthetics. They are also the reasons we use monitors (EKG, etc.) to make sure these procedures are as safe as possible. If you have any questions regarding our procedures, please ask our veterinarians.

Thank you,
Robert Shampo, DVM
Tia Kastenson, DVM

Your signature below is acknowledgement that you have read and understand the above information.

I hereby consent and authorize the above named to receive, prescribe for, treat and/or operate upon my pet. I assume all risks with regard to restraint, anesthesia, surgery and general care of aforementioned pet.

I understand that any estimate given for medical/surgical procedures is not a definite cost quote and I assume all financial liabilities incurred for professional services rendered. I understand that all fees must be paid before the pet is discharged from the hospital.
